October 26-28, 2016 The K-Hotel, Seoul, Korea

## Luminex

### Product Highlights

#### MAGPIX

#### MAGPIX®

Multiplexed Genomic, and Proteomic Biomarker Analysis

MAGPIX is based on xMAP technology for multiple analytes and designed for ease of use allowing new and experienced users alike to set up and run an assay in a minimal amount of time. ELISA-like workflow, intuitive software interface, online training will minimize your ramp-up to multiplexing.

MAGPIX is testing for a single analyte or multiple analytes, proteins or nucleic acids and is broad menu of commercially available assay kits and reagent for user-developed assay. Innovations in optics have resulted in a compact, robust system that is user installable in less than two hours. These advancements and low maintenance requirements make MAGPIX the ideal platform for small laboratories with limited budgets.
