

UNIONLAB INC.

Product Highlights

GRIFOLS Erytra®

Erytra® is Grifols' latest development in automated systems and a fully automated, high-throughput and high-capacity instrument for performing pre-transfusion compatibility tests using gel technology. The instrument's excellent self-organizing capacity optimally performs all the different steps needed for blood group typing and unexpected antibody identification of high workloads of samples with total traceability, minimal intervention and clear results. Its latest generation intuitive software ensures an easy interaction with all users together with an optimal instrument management and data analysis.

Erytra® is unbeatably efficient and flexible to adapt to your laboratory needs and assist you in delivering highly reliable results, in as little time as possible, to ensure the safety of your patients

○ *Large capacity, High throughput*

- Throughput: Ab screening 400 T/hr
- Gel card capacity: 400 cards
- Sample capacity: 96 patients
- Autonomy: 4 hours
- Random access test method
- USA FDA approved, CE marked

○ *Test Menu*

- ABO/Rh forward grouping
- ABO/Rh reverse grouping
- Rh phenotyping test
- Direct Coombs test
- Unexpected Antibody screening test
- Unexpected Antibody identification test
- Weak-D test
- Rare antigen investigation
- Diego A test
- Cross-matching test
- QC testing
